Developing The Electronics Industry:

Developing the Electronics Industry World Bank, 1993 A vital electronics industry can boost a country's economic growth provide jobs for skilled workers and speed development in other sectors This report shows how to build a modern and competitive electronics industry It gives step by step advice on the market conditions enterprise strategies and government policies that can create a successful electronics sector The editors suggest guidelines to help countries identify competitive segments of industry They explain why prospects lie in products for industry computers and telecommunications Their advice points out which products countries should focus on initially It recommends ways to expand once basic production and skills are established The role government must play in developing the physical infrastructure and a skilled work force is examined and major trends in the global electronics industry are reviewed in detail The collection focuses on semiconductors computers consumer electronics and telecommunications It examines how electronics developed in advanced industrial economies while electronics industries in selected developing economies and newly industrialized economies are also evaluated The report explores the roles played by foreign investment and technological development It describes key government interventions that prepared private enterprises and labor markets for market competition The book points out government interventions and industry practices that hampered efficiency and growth and gives practical advice on improving public policies and boosting industry performance

Developing the Electronics Industry Bjorn Wellenius, Arnold Miller, Carl J. Dahlman, 1993 [The Role of the Electronics Industry in Economic Development](#) Bhausahubale, 1976 This study is concerned with the examination of the role of the electronics industry in the development of developing countries The electronics which is a backbone of modern industrial activities has stimulated growth in developed countries The main aim of this study therefore is to test whether the consumption and production of electronics could stimulate similar growth in developing countries With this object in view we have focused our attention upon answering two basic questions viz 1 What impact do electronics have on the development of the developing countries 2 If the electronics industry were found to be vital to developing countries do the developing countries possess the necessary resources to undertake production of electronics technology and products The answers to these questions are presented in two parts In Part 1 we have attempted to answer the first question using analytical techniques We have observed that consumption and production of electronics will create technological transformation in the economy and thereby accelerate the speed of development We have also analysed the technological characteristics of electronics and found that the continuous chain of innovations produced by the electronics industry has created significant impact on the growth of the economy via both investment and technological multiplier effects In the light of this discussion some general hypotheses were suggested to the effect that the growth of the electronics industry has a significant contribution to the growth of the economy Part II deals with providing answers to the second question which takes the form of an empirical examination of industry's structure

vertically as well as horizontally The former deals with the economics and production aspects of the electronic products and technology at the national level and the latter with the production at the global level As a case study we studied the U K electronics industry for an in depth investigation into its vertical structure For a global examination we analysed the following aspects such as growth trends in selected countries both developed and developing the role of multinational companies in international production their impact on the economy of a developing country and the trends in the international consumption of electronics On the basis of this analysis we assessed the potentialities of the electronics industry for developing countries and found that because of the dominating position held by multinational companies in technology production and marketing of electronic products the prospects for developing countries to promote the growth of their own industry are extremely limited We have therefore suggested a co operative strategy on the part of the developed and developing countries to organise the production of electronics at the international level This research has been conducted in the face of severe limitation of data and information with respect to the electronics industry There has been a relative absence of any academic research in this industry particularly in relation to the problems and aspirations of the developing countries to promote the growth of such industry This industry as we see in this thesis is organised and operated at an international level and consequently any analysis of its structure assumes an international dimension Hence we found that a detailed and systematic examination of the electronics industry at the international level was very essential in order to explore its potentialities for any developing country To that end this thesis has made we hope some significant contribution

Technology Transfer and International Production Jin W. Cyhn,2002-03-27 This book analyses the technology development efforts of Korea s electronics industry the country s largest exporter It asks how the Korean electronics industry was able to develop both in terms of production and technology despite low inflows of licensing and foreign direct investments The books argues that the key to its spectacular growth has been through its participation and learning from an inter firm arrangement called original equipment manufacturing arrangement OEM A number of firm level case studies on the Korean electronics industry support this argument The role of the government especially related to its technology policy has also been analysed The government was effective in providing financial incentives for the firms technological upgrading efforts but its supplying of direct technological assistance had limited success Overall this book argues that contrary to many previous studies the role of multinational enterprises has been significant in the development of Korea s electronics industry and that they have acted as a technological tutor for Korea through OEM P xiv tributors world 0

Rubenstein,Dawson E. Brewer,NORTHWESTERN UNIV EVANSTON ILL.,1962 The study was an attempt to learn more about the relationships between research and development and company growth in the electronic industry with particular reference to the Chicago area *Issues in the Technological Development of China's Electronic Sector* Anupam Khanna,1986 Although the electronics industry in China has come a long way since 1949 Chinese authorities acknowledge that it is at least 15 20 years behind the levels of Japan and the U S necessitating new and improved productive processes as well as new products in the electronics industry The paper examines China s electronics industry and its scope for development by considering its application to other indigenous industry at what level and by what means development should occur and what institutional structures will need to be set up **Interpreting the Emergence and Development of High Technology Electronics Industry Clusters in Selected Second Tier Global Regions** Ronald Grill,2014 The thesis focuses on the high technology electronics industry and why and how electronics manufacturing firms emerged developed and evolved endogenously into dense industry clusters in a limited number of selected small and relatively isolated second tier cities These developments occurred in small regions rather than in large established industrial centres The high technology electronics industry typically produces small volumes of highly complex high value added customisable intellectual property based products and systems for commercial industrial and professional applications in sectors including food health security transport government communications manufacturing defence education and research The high technology electronics industry developed in parallel to the large typically multinational firms which mass produce high volumes of standardised consumer electronics products for personal communication information and entertainment The parallel development of these two sectors provides significant contrast since the high technology electronics industry although significantly larger in revenue and employment than the consumer electronics sector is less understood by governments and communities The research examines the widely studied high technology electronics industry in Silicon Valley California Cambridge UK and Austin Texas that by incorporating technologies developed in their universities the industry emerged and evolved over decades into dense interconnected regional clusters of typically smaller firms and related organisations Knowledge obtained from these exemplar clusters assists the understanding of the origin and development of

high technology electronics clusters in the second tier regions of Adelaide and Christchurch The thesis analyses and quantifies these antipodean electronics industry clusters and adds to the growing literature describing the endogenous emergence and self organised development of technology based firms into clusters in small and relatively remote second tier cities and without the involvement of universities Endogenous cluster development is contrasted with electronics industry clusters created by government programs in selected regions The contribution to knowledge is consistent with and builds on the work of Porter 1990b and Mayer 2011 The thesis recognises that a stimulus other than universities occurred in Adelaide through the establishment in 1947 of Australia s defence research and development laboratories and in Christchurch through the 1954 start up of a two way radio manufacturing firm Through spin outs and start ups the electronics clusters in these two second tier cities have reached the highest density in their respective nations comparing favourably with the leading global electronics industry clusters The thesis recognises that in small cities proximity to industry peers facilitates trust and collaboration and that ethical and reliable behaviour of cluster members is essential in these close knit communities The thesis provides case studies of firm and cluster origin and development with cross regional data comparisons and regional location quotients Australian statistics on location quotients are not published for the electronics industry and Australian governments generally appear to be unaware of the economic value of the high technology electronics manufacturing industry With knowledge of electronics industry origin and cluster development government and industry can develop policies and programs for its sustainable development and its major role in the transition of the regional economy of Adelaide from its past dependence on industrial age manufacturing to its future through knowledge age industry
