Cross-Disciplinary Models and Applications of Database Management: Advancing Approaches Siau, Keng, 2011-12-31 Within a given enterprise database management involves the monitoring administration and maintenance of the databases which constantly change with new technologies and new forms of data Cross Disciplinary Models and Applications of Database Management Advancing Approaches is an updated look at the latest tools and technology within the burgeoning field of database management Perfect for the network administrator technician information technology specialist or consultant or for academics and students this volume presents the latest the field has to offer by way of cases and new research As database languages models and systems change it s vital for practitioners within the field to stay abreast of the latest research and methods being used around the world and this book offers the most current advances available

Real-Time Database and Information Systems: Research Advances Azer Bestavros, Victor Fay-Wolfe, 2012-12-06 Real time systems are defined as those for which correctness depends not only on the logical properties of the produced results but also on the temporal properties of these results In a database real time means that in addition to typical logical consistency constraints such as a constraint on a data item s value there are constraints on when transactions execute and on the freshness of the data transactions access The challenges and tradeoffs faced by the designers of real time database systems are quite different from those faced by the designers of general purpose database systems To achieve the fundamental requirements of timeliness and predictability not only do conventional methods for

scheduling and transaction management have to be redesigned but also new concepts that have not been considered in conventional database systems or in real time systems need to be added Real Time Database and Information Systems Research Advances is devoted to new techniques for scheduling of transactions concurrency management transaction logging database languages and new distributed database architectures Real Time Database and Information Systems Research Advances is primarily intended for practicing engineers and researchers working in the growing area of real time database and information retrieval systems For practitioners the book will provide a much needed bridge for technology transfer and continued education For researchers the book will provide a comprehensive reference for well established results The book can also be used in a senior or graduate level course on real time systems real time database systems and database systems or closely related courses

Database and Expert Systems Applications A Min Tjoa, Isidro Ramos, 2012-12-06 The Database and Expert Systems Application DEXA conferences are mainly oriented to establish a state of the art forum on Database and Expert System applications But Practice without Theory has no sense as Leonardo said five centuries ago In this Conference we try a compromise between these two complementary aspects A total of 5 sessions are application oriented ranging from classical applications to more unusual ones in Software Engineering Recent research aspects in Databases such as activity deductivity and or Object Orientation are also present in DEXA 92 as well as the implication of the new data models such as OO Model Deductive Model etc included in the Modelling sessions Other areas of interest such as Hyper Text and Multimedia application together with the classical field of Information Retrieval are also considered Finally Implementation Aspects are reflected in very concrete fields A total of of nearly 200 papers submitted from all over the world were sent to DEXA 92 Only 90 could be accepted A Poster session has also been established DEXA 90 was held in Vienna Austria DEXA 91 in Berlin Germany and DEXA 92 will take place in Valencia Spain where we are celebrating the discovery of the New World just five centuries ago in Leonardo's age Both the quality of the Conference and the compromise between Practice and Theory are due to the credit of all the DEXA 92 authors

approximately three orders of magnitude faster than prior real time database systems Another contribution of MDARTS is that it supports explicit declarations of real time requirements and semantic constraints within application code The MDARTS library examines these declarations at database object initialization time and attempts to construct objects that are compatible with the requirements MDARTS supports both local shared memory transactions and remote transactions that use remote procedure calls Except for variations in transaction time guarantees the locations and implementations of MDARTS objects are transparent to applications MDARTS provides a C interface rather than a query language interface Our MDARTS prototype runs on VME based multiprocessors and Sun workstations and we have used MDARTS to implement a controller for an actual manufacturing machine
