**Algorithm Synthesis** D. M. Steier, A. P. Anderson, 1989 *Algorithm Synthesis: A Comparative Study* David M. Steier, A. Penny Anderson, 2012-12-06 In early 1986 one of us D M S was constructing an artificial intelligence system to design algorithms and the other A P A was getting started in program transformations research We shared an office and exchanged a few papers on the systematic development of algorithms from specifications Gradually we realized that we were trying to solve some of the same problems And so despite radical differences between ourselves in research approaches we set out together to see what we could learn from these papers That s how this book started a couple of graduate students trying to cope with The Literature At first there was just a list of papers One of us D M S tried to cast the papers in a uniform framework by describing the problem spaces searched an approach used in artificial intelligence for understanding many tasks The generalized problem space descriptions though useful seemed to abstract too much so we decided to compare papers by different authors dealing with the same algorithm These comparisons proved crucial for then we began to see similar key design choices for each algorithm

**A Comparative Study of Optimization Algorithms for Engineering Synthesis** Chester Michael Sprague, NAVAL POSTGRADUATE SCHOOL MONTEREY CA., 1983 A variety of optimization algorithms for engineering synthesis are included in a new general purpose optimization computer program called ADS 1 Automated Design Synthesis Version 1 Preliminary testing of all presently available algorithms is conducted utilizing several carefully selected problems of significant size and complexity These include a problem with 56 design variables and over 3500 inequality constraints The capabilities and utility of the ADS program coupled with a structural analysis code utilizing finite element techniques is demonstrated and numerical results presented that compare the relative efficiency and reliability of the various optimization algorithms The number of function and gradient calculations are

considered important measures of merit in comparing the various algorithms. A comparison of results with another existing optimization computer code is included to document the accuracy and reliability of the ADS program. Preliminary testing of the ADS program demonstrates the flexibility a design engineer would have in selecting an optimization algorithm best suited to solve a particular problem.
