Language Processing in Spanish Manuel Carreiras, Jose E. Garcia-Albea, Nuria Sebastian-Galles, 2013-05-13 This book presents a set of contributions to the current flow of psycholinguistic research with new and challenging data gathered from Spanish that may illuminate issues about the generality of language processing models Although it is possible to find a considerable amount of papers on psycholinguistic research with the Spanish language published in English speaking journals unfortunately the scientific community does not have access to an overview of psycholinguistics in Spain This book overcomes these limitations because it brings together state of the art descriptions of the research and theory of the different subareas of psycholinguistics currently being studied in Spain Spanish the third most widely used language in the world differs from English in a number of important respects Since English has been predominant in psycholinguistic research contrasting properties of Spanish may help to test the generality of language processing mechanisms and to refine their description The set of contrasting features considered in this book includes acoustical and syllabic transparency shallow orthography a much richer morphology flexibility in word order less variability in intonational contours and the existence of null pronominal subjects for inflected verbs There are also interesting contrasts in the frequency of different linguistic units whose impact on language processing is also evaluated One of the main lines of argument throughout this book deals with the tension between universality and variation as a way of characterizing the functioning of language capacities and processes The variety of topics covered by this book ranges from one end of the spectrum of language related behavior to the other speech perception lexical access in word recognition relations between phonological and orthographic representations sentence processing discourse comprehension and language production All chapters focus on questions of general interest within each topic and in most cases they appeal to one particular feature of the Spanish language that is relevant for a given question Most chapters show the indisputable importance of crosslinguistic research in psycholinguistics to improve understanding on whether universal cognitive mechanisms and language specific routines underlie the ability of understanding and producing language

Phonology in the Bilingual and Bidialectal Lexicon Isabelle Darcy, Annie Tremblay, Miquel Simonet, 2017-07-06 A conversation between two

people can only take place if the words intended by each speaker are successfully recognized Spoken word recognition is at the heart of language comprehension This automatic and smooth process remains a challenge for models of spoken word recognition Both the process of mapping the speech signal onto stored representations for words and the format of the representation themselves are subject to debate So far existing research on the nature of spoken word representations has focused mainly on native speakers The picture becomes even more complex when looking at spoken word recognition in a second language Given that most of the world s speakers know and use more than one language it is crucial to reach a more precise understanding of how bilingual and multilingual individuals encode spoken words in the mental lexicon and why spoken word recognition is more difficult in a second language than in the native language Current models of native spoken word recognition operate under two assumptions i that listeners perception of the incoming speech signal is optimal and ii that listeners lexical representations are accurate As a result lexical representations are easily activated and intended words are successfully recognized However these assumptions are compromised when applied to a later learned second language For a variety of reasons e g phonetic phonological orthographic second language users may not perceive the speech signal optimally and they may still be refining the motor routines needed for articulation Accordingly their lexical representations may differ from those of native speakers which may in turn inhibit their selection of the intended word forms Second language users also have to solve a larger selection challenge having words in more than one language to choose from Thus for second language users the links between perception lexical representations orthography and production are all but clear Even for simultaneous bilinguals important questions remain about the specificity and interdependence of their lexical representations and the factors influencing cross language word activation This Frontiers Research Topic seeks to further our understanding of the factors that determine how multilinguals recognize and encode spoken words in the mental lexicon with a focus on the mapping between the input and lexical representations and on the quality of lexical representations
