For example, a consumer can easily schedule the delivery of a gourmet meal from an online catering company. B2C. However, the online catering service has a much more difficult time using the Web to link its operations to produce markets and courier services. The problem: Companies use different formats, protocols, and applications that don't know how to talk to each other. Enter Web Services and its various protocols like SOAP, UDDI, and WSDL. With Web Services, if the online catering service receives an order for fish that isn't available from their local resources, a Web Service can be launched to explore the registries of seafood markets in order to locate the fish. Microsoft, IBM, BEA, and Sun are the current market leaders in Web Services. Microsoft has centered its Web Services strategy around .NET; everyone else has chosen Java.
