Caprani,2021-12-02 There is considerable uncertainty about what level of traffic loading bridges should be designed for Codes specify notional load models generally to represent extreme levels of normal traffic but these are often crude and have inconsistent levels of safety for different load effects Over the past few decades increasing quantities of reliable truck weight data has become available and it is now possible to calculate appropriate levels of bridge traffic loading both for specific bridges and for a road network Bridge Traffic Loading brings together experts from all over the world to deliver not just the state of the art of vertical loading but also to provide recommendations of best practice for all the major challenges in the field short span single and multi lane bridge loading dynamic allowance and long span bridges It reviews issues that continue to be debated such as which statistical distribution is most appropriate whether free flowing or congested traffic governs and dealing with future traffic growth Specialist consultants and bridge owners should find this invaluable as will regulators

Bridge Load Rating Rafael Armendariz,Mark Bowman,2018-08-15 The inspection and evaluation of bridges in Indiana is critical to ensure their safety to better serve the citizens of the state Part of this evaluation includes bridge load rating Bridge load rating which is a measure of the safe load capacity of the bridge is a logical process that is typically conducted by utilizing critical information that is available on the bridge plans For existing poorly documented bridges however the load rating process becomes challenging to adequately complete because of the missing bridge information Currently the Indiana Department of Transportation INDOT does not have a prescribed methodology for such bridges In an effort to improve Indiana load rating practices INDOT commissioned this study to develop a general procedure for load rating bridges without plans The general procedure was developed and it was concluded that it requires four critical parts These parts are bridge characterization bridge database field survey and inspection and bridge load rating The proposed procedure was then evaluated on two bridges in Indiana that do not have plans as a proof of concept As a result it was concluded that load rating of bridges without plans can be successfully completed using the general procedure A flowchart describing the general procedure was created to make the load rating process more user friendly Additional flowcharts that summarize the general procedure for different type of bridges were also provided *Bridge Engineering* John Alexander Low Waddell,1916
