PREFACE IN the present volume dealing with the Chemical Technology of the Textile Fibres except as concerns the dye stuffs which will be treated in a separate work the author has been obliged to condense the available matter as much as possible in order to preserve the form of a text book Nevertheless it seemed necessary in certain cases in the interests of the book to give definite data and an exact description of individual processes In such instances the details have been gathered exclusively either from the authors personal experience or from reliable sources The most important part of the book is the chapter treating of dyeing whilst on the other hand the subject of printing had to be dealt with in a more general fashion the materials being less suitable for treatment in text book style The author thinks it desirable to point out that in the present work an attempt has been made to completely separate the chemical and mechanical technology of the subject a standpoint he considers justified by the extensive area occupied by each of these branches Hence only a few sketches of apparatus have been given and the methods of dressing the finished goods have been described very briefly since they almost entirely belong to the domain of mechanical technology
