PAIN is an unpleasant sensory and emotional experience associated with actual or potential damage of tissues. Individuals experience and express pain differently.

PAIN RELIEF improves the quality of life of patients with cancer.

The goal of pain management is to relieve pain to a level that allows for an acceptable quality of life.

Patients with cancer may require pain relief at **all stages of their disease** and not only at the end of life.

Better results in terms of pain and symptom management can be achieved when:

- palliative care is introduced **early** in the course of illness;
- an approach **tailored to each individual** is adopted together with disease-modifying therapies.

ACCESS TO PAIN RELIEF AND PALLIATIVE CARE IS A HUMAN RIGHT AND AN ESSENTIAL PART OF UNIVERSAL HEALTH COVERAGE.
